

UV purification - LED driver - 700MM strip

Reference: UV-base

392.50€ tax excluded

Product short description:

UV-c air disinfection system. LED control. The LED control can be installed on several places: 1. Under the drainer. 2. In the cable passage. 3. In the ceiling above the unit. LED UV-c strip light. The standard UV-c LED strip kit is placed at an angle at the top of the evaporator spiral and ensures that the UV-c LEDs are facing inwards. The UV-c LEDs should not radiate or point towards the room. On request, there is also an optional pro-kit (48 LED extension). In order to protect the LED strip light in cold/wet environment, a conformal coating is applied to the LED strip light and clamps. The LEDs themselves are not coated so as not to deflect or dilute the light radiation. If necessary, the UV-c LED strip can be shortened to the desired length.

Product features:

Electric power: 22 W
